Manual[/caption] The identical affiliation arm system included high breakout moment in the leading position while keeping power in all various other placements integrated with very friendly parallel motion. The disign of the arm system also afforded the driver exceptional onward visibility. Today, some 20 makers have replicated this new improved system. A recognition just as good as any sort of for Volvo as a leader. An additional function on the 4300b was the pressurized, ROPS-approved, taxi with incorporated air problem as alternative. Easily read instruments as well as controls within very easy reach offered the operator with a friendly and also effective place to work. In 1981 a patented gearshifting system was introduced that was both engine rate and travel speed dependent-- Volvo BM Automatic Power Shift (APS).
